Swing Desk - Personal Use

Swing Desk - Personal Use Guide

1. REAL DATA
Stock closes = Kotak previous-session EOD (not live LTP).
Browse/search = full NSE EQ cash list (~2500).
Consultant BUY/SELL/HOLD = rules on that EOD. BEAR = cash on purpose.
Ignore DEMO signal-ledger rows if you see them.

2. SETUP
backend/.env:
  KOTAK_CONSUMER_KEY=<Neo Trade API token>
  MAX_INGEST_SYMBOLS=0   # 0 = ALL NSE EQ (was 500)
  ALLOW_DEMO_DATA=false
  AUTH_ENABLED=false   # optional for personal use
  INGEST_WORKERS=6
Start API: uvicorn app.main:app --reload --port 8000
Start UI: cd frontend && npm start -> http://localhost:3000

3. LOAD ALL SYMBOLS
Click Force full in the UI (or POST /api/ingest/latest?force=true).
Full universe takes hours (Kotak rate limits). Watch /api/ingest/progress.
Symbol list file: backend/nse_eq_symbols.txt

4. DESKS
Swing = weekly screen + planner + journal + radar
Intraday = near-live bias board
MCX = commodities tape (map lots yourself)
Open a symbol for chart + financials.

5. PRICE MISMATCH (e.g. 288.90 vs 287.30)
App shows official previous close. Brokers show last traded price.
On weekends the app correctly stays on Friday EOD.

6. LIMITS
No order execution. No profit guarantee. Cash weeks are normal in BEAR.
Full ingest != every name becomes a swing pick (liquidity/score filters apply).
